

AVG® AntiVirus

Award-winning Antivirus protection detects, blocks, and removes viruses and malware from your company's Windows and Mac PCs and servers.

How does this benefit you?

Automatic updates and upgrades

Ensure that your employees' protection is always up-to-date. Real-time updates, upgrades, and even uninstalls are automatically pushed to your employees' computers so there's no need to waste time with manual checks.

Protects while browsing

AVG AntiVirus works with any web browser to check files before they're downloaded and to scan URLs to protect your employees while searching, shopping, and banking online.

Verifies links before you click

Actively checks web links before it's clicked to prevent your employees from visiting malicious websites. Also provides automatic, real-time scans of any links exchanged on Facebook®, Twitter®, or Skype®.

Blocks hackers

Our firewall works on both wired and wireless networks to protect your company's data and prevent malware from taking over your PCs. With inbound and outbound port and application protection, your business is always protected.

Scans without distractions

AVG Smart Scanning reduces distractions. Scans run only when your employees are not using their PCs, and switch to low-priority mode while they're working.

Protects identity

If your employees shop online, we'll warn them when we detect any potentially dangerous software trying to steal their passwords or credit card numbers.
